

Custom Screens Pricing Sheet

Interactive Payroll Schedule – \$1500.00

Stop printing the Payroll Schedule report to see which payrolls have and have not been processed.

The Interactive Payroll Schedule screen replaces the standard Payroll Schedule screen. It provides a wealth of information compared to the standard screen. It is also sortable, filterable and provides real-time information. This will allow your staff to immediately see which payrolls have been processed vs. which are still outstanding. The scheduled process date for any payroll scheduled for today can be moved with the click of a button. The date range can also be adjusted to see scheduled payrolls in the future or see what was processed in the past.

Company Dashboard – \$1000.00

Get all the pertinent information about a company at a glance.

The Company Dashboard replaces the standard Company Menu and Company Maintenance screens. It provides the standard navigation buttons above a new area of the screen containing handpicked information your staff needs. Information displayed includes company status, hold status and reason, payroll status, last payroll processed, active employee count by state, direct deposit count, active services, accruals and more!

Search and Utility Page – \$500.00

Search the entire Millennium database and recalculate GLs in one spot.

The search page allows a CSR or staff member without direct database access to search for company information and email addresses. They can also submit calc GL jobs for a company over a selected date range.
